In general, there was an appropriately diverse mix of patients (including race and ethnicity) seen on this service to meet the clinical training objectives.

The amount of patient care responsibilities assigned to me were just about right for my current level of training.

In general, I had an opportunity to develop procedural skills commensurate with my level of training.

I was given ample opportunity to become involved in learning about management of patient cases.

I felt supported and encouraged to offer my own differential diagnosis and treatment plan.

**Expectations/Learning Objectives**

Standards for my expected level of performance (how I was to be evaluated) on this rotation were made clear to me at the outset.

On this rotation, the course protocol and its learning objectives were used by my preceptor to help me focus on content and/or skills that I was expected to master.

There were adequate didactics on this service to enhance my existing knowledge base; i.e. conferences were scheduled regularly and occurred as scheduled.

The information presented on this rotation was presented at a pace and at a level that was consistent with my existing knowledge base.

**Resources**

There were sufficient educational resources (computers, books, journals, & other library materials) available to me on this rotation.

I had access to educational resources at times that were convenient to me.
### Osteopathic Principles and Practice

On this service there were facilities and opportunities available to support learning about osteopathic manipulative medicine (OMM).

Faculty knowledgeable in the appropriate use of OP&P in case management were available to me as needed.

I had opportunities to use OMM on this service.

When seeking out opportunities to apply OMM, I felt supported by the faculty here.

### Preclinical Preparation

The basic science content I learned in Year 1 assisted me in learning from the experiences I encountered on this service.

The systems biology content I learned in Year 2 assisted me in learning from the experiences I encountered on this service.

In general, the material I learned in Years 1 & 2 had little clinical relevance to what I encountered on this service.

### Supervision/Feedback

I received timely feedback about development of my clinical skills (e.g. charting, physical exams, history taking, and DPR, etc.)

On this service, I never quite knew where I stood in meeting expected outcomes.

On this service, there was always someone available to answer my questions when I had them.

The post-rotation examination covered the core content areas as described in the course protocol.

![Clerkship Rotation Evaluation Results](image)
I received ample opportunity to perform a physical examination of the obstetrical patient.

In the delivery room, I properly performed a bladder catheterization on an obstetrical patient.

I now feel as if I can properly insert a venous catheter or needle for IV fluids.

I was able to complete an accurate vaginal examination on a patient in labor and delivery.

I feel comfortable scrubbing and maintaining compliance with sterile techniques.

With supervision, I am able to perform a normal vaginal delivery.

With supervision, I am able to perform an adequate midline episiotomy at the proper time.

I can accurately assign proper Apgar scores to newborn infants.

I feel prepared to deliver the placenta and examine its surface.

I feel prepared to adequately assist during gynecological surgery.
This rotation offered a positive learning experience and stimulated my interest in this specialty of medicine.

Taking everything into account, my experiences on this rotation stimulated my commitment to become a physician.

Taking everything into account, my experiences on this rotation stimulated my commitment to become an osteopathic physician.

As a student I felt comfortable on this rotation.
### Caseload and Management of Patients

**Section Comments**

- Good volume.

### Expectations/Learning Objectives

**Section Comments**

- Well organized, thank you Dr. Boes & Petroff.

### Resources

**Section Comments**

- MSUCOM needs to get us access to APGO’s online question bank.

### Osteopathic Principles and Practice

**Section Comments**

- I do not feel it appropriate to perform manipulation on preggers of newborns. Personal choice.

### Preclinical Preparation

**Section Comments**

- Boes & Petroff did a good job second year & Paganini did a good job first year. Give them pay raises.

### Supervision/Feedback

**Section Comments**

- Easily approachable.

### Professionalism

**Section Comments**

- Never been talked to about professionalism - never been an issue.

### Procedures

**Section Comments**

- In on lots of deliveries & C-sections. In on lots of Gyn surgery.

### (MSU COM) Online Learning Modules: Modules on Hypertension and Pregnancy, Gestational Diabetes, and Normal Delivery

A thorough review of the procedures needed for this rotation is necessary during the campus orientation.

- Haven’t watched them yet, probably going to be a waste of time in the long run though.
- I don’t think that this is needed.
- I’m not sure what a campus orientation is.
- I am not sure what campus orientation this survey is referring to?
- not really

The online modules for this course that is available in Angel helped me gain medical knowledge.

- Certainly not.
yes

The modules lack a little on the technical side but they were okay

I thought the online modules were very helpful - I felt like they went over exactly the kinds of things I needed to know on my rotation, especially helpful in the OB maternity ward.

nope

Which of the modules (including the Camtasia recordings about hypertension and pregnancy, normal delivery and gestational diabetes) did you find most helpful?

Haven't watched yet.

normal pregnancy

They were all helpful

I really did think they were all helpful, the normal labor and delivery module was especially good.

none

What other types of online learning tools do you prefer?

none

Lectures and modules

quizzes that do not count for points that I can do on my own time to test my knowledge and prepare for my shelf exams.

none

I feel that the hospital orientation covered what I needed to know to be successful in this rotation.

Nope, disagree.

not true. hospital orientation did not cover much.

No

I am not sure what hospital orientation this survey is referring to?

nope. came in later than the other 4 students and the doctors here are used to one student at a time. com students should not have to compete with chm students for time on rotations that have always been available to them in years past. the physicians, students, and coordinators don't like it.

Overall Assessment

Section Comments

Dr. LaGattuta is a great teacher, perhaps the best I have ever encountered. I was able to do, see, and learn so much on this rotation and I know that I want to include much OB care in my family practice someday.

I like Ob, so I'm biased.

Way too many student on the rotation. The preceptors never knew who was coming or going.

Overall Summary - Please complete the following sentences

The most beneficial experiences, classes, assignments, or activities in all my on-campus MSU/COM courses/experiences, which facilitated my performance on this clerkship rotation, were:

Didn't learn much in class. Learned it in clinic.
Female repro. & physiology, obviously.
clinical skills female sensitive exams
Female Repro helped, but other than that I think we aren't taught as well on GYN topics.
The courses given at MSU dealing with OB and womens health were helpful, but I had to do a lot of reading on my own.
none

This rotation could have been improved by:
Nothing. Fabulous rotation. Dr. LaGattuta is an MD, but I believe that he is a DO at heart (though he may not know it).
Enhance the organization up here at the base site & DO NOT REQUIRE SO MUCH PAPERWORK & BUSYWORK BY THE STUDENT - let us go learn.
allowing the students to do more and be more hands on.
nothing
nothing I enjoyed this rotation.
Either fewer student on, or scheduling students to specific preceptors rather than specific locations.

The thing(s) I like most about this rotation was (were):
All the things I was able to do. Surgical assist, deliver babies, many procedures, lots of documenting, clinical skills, DPR improvement.
The babies.
Doctors are very helpful when it comes to answering my questions.
The amount of births and C-Sections I was allowed to be apart of.
I was allowed to do a lot of things on my own, such as deliver babies with supervision and perform cervical checks on women in labor, it was a very good experience and I learned a great deal on this rotation - I feel very prepared to take my OB/Gyn shelf exam.
I love OB, but wish I could have been more involved.
