In general, there was an appropriately diverse mix of patients (including race and ethnicity) seen at this base hospital to meet the clinical training objectives.

The amount of patient care responsibilities assigned to me were just about right for my current level of training.

In general, I had an opportunity to develop procedural skills commensurate with my level of training.

I was given ample opportunity to become involved in learning about management of patient cases.

I felt supported and encouraged to offer my own input into the anesthesia and treatment plan.

Standards for my expected level of performance (how I was to be evaluated) on this rotation were made clear to me at the outset.

On this rotation, the course protocol and its learning objectives were used by my preceptor to help me focus on content and/or skills that I was expected to master.

There were adequate didactics on this service to enhance my existing knowledge base; i.e. conferences were scheduled regularly and occurred as scheduled.

The information presented on this rotation was presented at a pace and at a level that was consistent with my existing knowledge base.

There were sufficient educational resources (computers, books, journals, & other library materials) available to me on this rotation.

I had access to educational resources at times that were convenient to me.

The COM Clerkship Website provided convenient access to course documents and materials related to this rotation.
On this service there were facilities and opportunities available to support learning about chronic pain management.

Faculty knowledgeable in the appropriate use of chronic pain management in case management were available to me as needed.

I had opportunities to be involved in chronic pain management.

I am interested in opportunities to study chronic pain management.

The basic science content I learned in Year 1 assisted me in learning from the experiences I encountered on this service.

The systems biology content I learned in Year 2 assisted me in learning from the experiences I encountered on this service.

In general, the material I learned in Years 1 & 2 had little clinical relevance to what I encountered on this service.

I received timely feedback about development of my clinical skills (e.g. charting, physical exams, history taking, and DPR, etc.)

On this service, I never quite knew where I stood in meeting expected outcomes.

On this service, there was always someone available to answer my questions when I had them.

The post-rotation examination reflected the core content areas as described in the course protocol.
### Professionalism

I was treated as a professional by those supervising my *student-physician* role on this service.

My supervising faculty on this service modeled *physician-patient* interactions on this service in ways I would like to emulate.

Issues of professionalism were included as a point of discussion by faculty on this rotation.

### Procedures

I have had opportunities to ventilate patients using bag/mask.

I have had opportunities to intubate patients.

I have had opportunities to insert nasogastric tubes.

I have had opportunities to start peripheral IV’s.

I was given enough training and orientation during my years one and two in these procedures.

I feel the on-campus orientation (online) prepared me for these procedures.

I feel the hospital orientation prepared me for these procedures.

Internet/Web-Based Experience

The most favorable aspect(s) of this web-based learning experience for me was (were):

The powerpoint presentation on the overview of anesthesia.

Interacting with different CRNAs - they each had a different style of teaching and how they performed procedures and interacted with patients so it was helpful to see the variety.

Good information

It's availability when I was available.

Videos of clinical medicine.

good practice questions

I would have been better prepared if only the protocol had said something about:

I was prepared only because the student previously had told me what was important to read and things to know.

more about intubation technique

procedure videos

If I could change one thing to make this web-based learning experience more beneficial it would be to:

More focused on pharmacology and the basic mechanism of how the machines work

more details

Fix the bugs that caused it to crash so many times on me. I had to retake the quiz several times because it continually showed that I failed after each time it crashed.

better video links

Overall Assessment

Section Comments

.

Overall Summary - Please complete the following sentences:

The most beneficial experiences, classes, assignments, or activities in all my on-campus MSU/COM courses/experiences, which facilitated my performance on this clerkship rotation, were:

NMS I

Respiratory was helpful to understand PEEP, Ve, and calculations of fluid and electrolytes

Pharmacology, Respiratory

Practicing intubations during the respiratory labs.

online breeze

This rotation could have been improved by:

Slightly more direction on what to do the entire day.

No change

This was a great rotation
The thing(s) I like most about this rotation was (were):

- Being allowed to intubate and insert LMAs.
- Learning how to do basic things - filling a syringe, changing an IV bag etc. These are expected of us to know and it was helpful to have someone show us how to do it.

variety of experiences

- The CRNA's were all great in explaining medications/procedures to us. They always gave me the opportunity to do whichever procedure was needed.
