In general, there was an appropriately diverse mix of patients (including race and ethnicity) seen on this service to meet the clinical training objectives.

The amount of patient care responsibilities assigned to me were just about right for my current level of training.

In general, I had an opportunity to develop procedural skills commensurate with my level of training.

I was given ample opportunity to become involved in learning about management of patient cases.

I felt supported and encouraged to offer my own differential diagnosis and treatment plan.

### Expectations/Learning Objectives

Standards for my expected level of performance (how I was to be evaluated) on this rotation were made clear to me at the outset.

The information presented on this rotation was presented at a pace and at a level that was consistent with my existing knowledge base.

### Resources

There were sufficient educational resources (computers, books, journals, & other library materials) available to me on this rotation.

The online modules were helpful in understanding my patients.

The COM Clerkship Website provided convenient access to course documents and materials related to this rotation.

</table>
On this service there were facilities and opportunities available to support learning about osteopathic manipulative medicine (OMM).

Faculty knowledgeable in the appropriate use of OP&P in case management were available to me as needed.

I had opportunities to use OMM on this service.

When seeking out opportunities to apply OMM, I felt supported by the faculty here.

The basic science content I learned in Year 1 assisted me in learning from the experiences I encountered on this service.

The behavioral course content I learned in Year 2 assisted me in learning from the experiences I encountered on this service.

In general, the material I learned in Years 1 & 2 had little clinical relevance to what I encountered on this service.

I received timely feedback about development of my clinical skills (e.g. charting, physical exams, history taking).

On this service, I never quite knew where I stood in meeting expected outcomes.

On this service, there was always someone available to answer my questions when I had them.

The post-rotation examination reflected the core content areas as described in the course protocol.
Procedures

I feel prepared to create a relevant master problem list, especially related to behavioral and psychosocial patient issues.

I was encouraged to write prescriptions (when indicated) for patients I saw on this service.

I am now aware of how to incorporate a behavioral patient assessment into routine verbal and written summaries.

I still feel somewhat uncomfortable generating an appropriate assessment, including differential diagnosis, for behavioral patients.

I feel prepared to take an accurate and appropriate history and physical examination for patients with behavioral / psychosocial problem(s).

I feel prepared to write timely and appropriate chart notes for behavioral / psychosocial patients.
This rotation offered a positive learning experience and stimulated my interest in this specialty of medicine.

Taking everything into account, my experiences on this rotation stimulated my commitment to become a physician.

Taking everything into account, my experiences on this rotation stimulated my commitment to become an osteopathic physician.

As a student I felt comfortable on this rotation.
Caseload and Management of Patients

Section Comments

I addressed issues I had with the week with Dr. Navulari with the hospital coordinator, and the following weeks became much more beneficial to our educational experience.

Supervision/Feedback

Section Comments

This rotation was great in terms of teaching us how to manage psych patients we will see in our chosen specialities, but it did little to prepare us for the NBME shelf exam.

Professionalism

Section Comments

Dr. Ramesh was a fantastic physician. She was also an excellent teacher. I am grateful that we had an opportunity to work with her. She has a great repoir with her patients, and she truly cared about each and every one of them.

Overall Assessment

Section Comments

Stephanie was a true asset to the rotation. She was very helpful, and always available to help us students. I really enjoyed attending group sessions in the partial program. Also, the dual-diagnosis program in Detroit was a very wonderful experience. It helped me gain insight into patient's lives.

There is a great diversity of opportunities available on this rotation. All of the attendings are happy to have students and willing to teach on a daily basis.

Overall Summary - Please complete the following sentences

The most beneficial experiences, classes, assignments, or activities in all my on-campus MSU/COM courses/experiences, which facilitated my performance on this clerkship rotation, were:

The oral presentation was a great way for me to take a step back and diagnose a patient with what I already knew, while at the same time allowing me to research details and new therapies on the horizon.

DPR
Clinical Skills
Psych

Seeing a different side of medicine

The behavioral medicine class taken during year 2 was beneficial for this rotation.

Psychiatry course.

DPR, Clinical Skills, Behavioral

na

This rotation could have been improved by:

There could have been a sign-in sheet at the Case Review Session to display its importance.

Spending no time with dr navaluri. He never acknowledged us as students, never acknowledged his patients, would not listen to his patients, and would cause more dispair and harm to his patients than help. It was a very frustrating time to spend a week with him. He is the perfect example of what not to become as a physician.

More one on one patient interaction or more admit interviews
more interaction

Having a more structured program for students places at Oakwood Heritage Hospital in Taylor, MI (hospital I was at). Many times I did not know what was expected of me during the rotation and often times it turned out they expected essentially nothing from me. Other than a few instances on a select couple days during the month where I interacted directly with patients, this was nothing more than a glorified shadowing experience.

If I could have gone to an out-patient setting. If I could have seen pediatric psychiatry.

A little more outpatient experience

na

The thing(s) I like most about this rotation was (were):

I enjoyed my hospital site immensely. At Oakwood Heritage Hospital, there was a partial hospitalization program, an inpatient ward and I was also afforded opportunities to visit my preceptors outpatient clinics and responsibilities. Overall, Stephanie Stasiak and my preceptors at this location gave me a great learning experience in Psychiatry.

the staff was amazing and the doctors were always willing to answer questions and help us to learn

I was able to work with three different attending physicians which allowed me the ability to view different approached for working with patients with psychiatric diagnoses. I also got to spend a little bit of time at two different community mental health clinics in the inner city of Detroit which was a truly enjoyable and enlightening experience to see how the entire spectrum of psychiatric care (physician, social work, etc.) can truly make a difference in these patients' lives.

The inpatient setting

Great variety in patients, Great attendings who each taught different lessons in areas of psych. Helpful staff.
